Digital Literacy Project Report

Task 1 – Digital Literacy Awareness Infographic

I designed my infographic using Canva because it provides many free templates and design elements that make the work easier. The infographic focuses on key areas of digital literacy such as its meaning, useful tools for students, safe internet habits, professional online behavior, and email etiquette. I placed "Digital Literacy" at the center and connected other topics around it using simple points. Digital literacy was explained as the ability to use digital devices and the internet in a safe and effective way. I also included tools like Google Docs, Zoom, and Notion that help in studies. While designing, I tried to keep everything clean and easy to understand. The main challenge was fitting all the information properly without making it look messy. Overall, this task improved my creativity and helped me understand how visual content can communicate ideas better.

Task 2 – Student Digital Portfolio

For this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. Each platform plays an important role in building a student's professional presence. On GitHub, I created a profile README and understood how to upload and manage projects. LinkedIn helped me present my academic details and build a professional identity. Kaggle introduced me to data science practice and learning through datasets and competitions. In the coming years, I plan to regularly upload my work on GitHub, connect with professionals on LinkedIn, and improve my problem-solving skills on Kaggle. This task helped me realize the importance of maintaining an online presence, as these platforms can be useful for internships and job opportunities. It also showed me how consistent effort can help in long-term career growth.

Task 3 – Coding & Collaboration Platforms

In this task, I explored platforms like HackerRank and Google Forms. On HackerRank, I attempted a basic coding problem to understand how the platform works. I learned how to write code, execute it, and check results against test cases. Initially, I made a small mistake, but fixing it helped me understand the process better. For the second part, I created a Google Form with questions related to digital literacy. I used both multiple-choice and

short-answer formats. I also checked how responses are automatically stored in Google Sheets, which makes data collection easier. These tools are very useful for learning and collaboration. HackerRank helps in improving coding skills step by step, while Google Forms is helpful for surveys and group activities.

Task 4 – Email Etiquette & Communication

In this task, I focused on understanding proper communication through emails and social media. Sometimes students send very short or unclear messages without proper subject lines or explanation. This can create confusion for the receiver, especially teachers or professionals. I understood that writing a clear message with proper structure is important. A good email should include a subject, greeting, clear explanation, and polite closing. I also observed that similar misunderstandings happen on social media when people post or comment without thinking carefully. Messages can be interpreted differently, leading to unnecessary confusion. This task taught me that taking a few extra seconds to write properly can improve communication a lot and create a better impression.

Task 5 – Cybercrime Awareness

In this task, I studied phishing, which is a common type of cybercrime. Phishing happens when attackers trick users into sharing personal information like passwords or bank details. These messages often look real and create urgency so that people act quickly without checking. For example, a student might receive a message about an urgent issue with their account and click on a fake link. This can lead to loss of data or money. Students are often targeted because they frequently check messages related to studies. I also created a prevention checklist, which includes avoiding unknown links, using strong passwords, and enabling extra security like OTP. This task made me more aware of online risks and taught me to be more careful while using the internet.
